Strengthening Forensic Science in the United States National Research Council 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

RAF Fighter Command Pilot Mark Barber 2012-09-20 The recent 70th anniversary of the Battle of Britain, combined with the threat of significant cuts to the current RAF, have highlighted the importance of Fighter Command in the early days of World War II once more. The role of the "few†, as described by Churchill, during the Battle of Britain has been the subject of much mythologizing both at the time and in the years since. This title will put Fighter Command in context; describing the lack of funding and attention which it received during the interwar period, until it was almost too late. The myth of the fighter pilot will be humanized, with first-hand accounts quoted which put nervous but brave human beings from all walks of life in the cockpit. Although the Battle of Britain may not have in itself been the decisive encounter that it has historically been portrayed as, the moral victory won by the RAF, the victory that proved that Germany could be defeated, was just as important as a military-strategic victory.

The Logic of Economic Reform in China Xiaojing Zhang 2015-11-19 This book provides a historical overview of Chinese economic reform over the past 30 years. From the genesis of the reform to the gradual improvement of the market system, and then to the re-start of the critical stage of the reform, this book includes not only research on the reform process, but also detailed descriptions of the key areas of reform since the Third Plenary Session of the 18th CPC Central Committee. On this basis, the author develops six logics for Chinese economic reform. Firstly, reform is cyclical, moving between rapid advances and deadlock; this calls upon us to re-examine the common view of reform. Secondly, reform is systematic; it cannot succeed without supporting reforms in other fields. Thirdly, the relationship between reform, development and stability should be properly handled. This "trinity" is quite different from the perspective of western mainstream theory, which puts too much emphasis on efficiency. Fourthly, the success of Chinese reform was not achieved by chance. The reform practice is based on the theoretical logic, and also goes beyond the debate between progressive and radical modes. Fifthly, the Top-level Design should be combined with "crossing the river by moving from stone to stone," i.e., the theoretical basis of reform should be combined with reform practice. Sixthly and lastly, the ongoing reform in China must be understood in the contexts of global competition and reform competition.
