Edwardian House Trevor Yorke 2013 Edwardian houses, built between 1880 and 1914, remain some of our best constructed, elegant, and durable housing stock. Many were influenced by the romantic styles of Art Nouveau and the Arts and Crafts Movement. It was an age of mass production, but the pride in these homes shown by their builders is still evidenced by the dates of construction and the rural names given to them, often seen above the front door or carefully chiseled onto a plaque below the roof. This book focuses on the original exterior and interior features that would have been added by the builder but which may since have been replaced or removed. They include sash and casement windows, coloured glass, door plates and handles, letter boxes, porches, balconies, rainwater hoppers, fireplaces, stairs, wall mouldings, and fitted cupboards. A strong pride of ownership remains with today s owners. For anyone restoring features in their own Edwardian home, or

who simply enjoys an admiration of period properties, then this book will be an invaluable guide. ."

The Ethics of Belief and Beyond Sebastian Schmidt 2020-04-03 This volume provides a framework for approaching and understanding mental normativity. It presents cutting-edge research on the ethics of belief as well as innovative research beyond the normativity of belief—and towards an ethics of mind. By moving beyond traditional issues of epistemology the contributors discuss the most current ideas revolving around rationality, responsibility, and normativity. The book's chapters are divided into two main parts. Part I discusses contemporary issues surrounding the normativity of belief. The essays here cover topics such as control over belief and its implication for the ethics of belief, the role of the epistemic community for the possibility of epistemic normativity, responsibility for believing, doxastic partiality in friendship, the structure and content of epistemic norms, and the norms for suspension of judgment. In Part II the focus shifts from the practical dimensions of belief to the normativity and rationality of other mental states—especially blame, passing thoughts, fantasies, decisions, and emotions. These essays illustrate how we might approach an ethics of mind by focusing not only on belief, but also more generally on debates about responsibility and rationality, as well as on normative questions concerning other mental states or attitudes. *The Ethics of Belief and Beyond* paves the way towards an ethics of mind by building on and

contributing to recent philosophical discussions in the ethics of belief and the normativity of other mental phenomena. It will be of interest to upper-level students and researchers working in epistemology, ethics, philosophy of action, philosophy of mind, and moral psychology. *Matthew Arnold, the Poetry: the Critical Heritage* Carl Dawson 1973 **Introduction to Physical Anthropology 2011-2012 Edition** Robert Jurmain 2012-07-19 INTRODUCTION TO PHYSICAL ANTHROPOLOGY 2011-2012 continues to present the most up-to-date and balanced, comprehensive introduction to the field, combining an engaging writing style and compelling visual content to bring the study of physical anthropology to life for today's students. This book continues to keep pace with changes in the field by including thorough coverage of cutting-edge advances in molecular biology and genomics, primatology, key fossil discoveries, and modern human biology. A new Conclusion: Why it Matters, drives home the importance of understanding human evolution and the incredible impact our species has had, and will continue to have, on the environment and all life forms on this planet. The need to develop frameworks for joint problem-solving involving diverse stakeholders is unquestionable. Besides generating inclusivity,

which embraces academia, civil society, and policymakers in the public and private sectors, transdisciplinarity allows for the appreciation of phenomena from a multiplicity of angles and affords societies creative ways of seeking solutions to challenges that may appear intractable. This book puts forward alternatives within this arena and attempts to directly respond to the multilayered challenges of diffuse disciplines, interlinked socioeconomic problems, impacts of globalization, technological advancements, environmental concerns, food security, and more.

The Museum's Borders Simon Knell 2020-10-08 The Museum's Borders demonstrates that museum practices are deeply entangled in border making, patrol, mitigation and erasure, and that the border lens offers a new tool for deconstructing and reconfiguring such practices. Arguing that the museum is a critical institution for the operation of knowledge-based democracies, Knell investigates how they have been used by scientists, art historians and historians to construct our bordered world. Examining the role of museums in the Windrush scandal in Britain, the exclusion of Black artists in America, ideological and propaganda discourses in Europe and China, and the remembering of contested pasts in the Balkans, Knell argues for the importance of museums in countering unethical, nationalistic, post-fact political discourse. Using the principles of Knell's 'Contemporary Museology', The Museum's Borders considers the significance of the museum for societies that wish to know and remember in ways that empower citizens and build cohesive societies. The book will be of great interest to students and academics engaged in the study of museums and heritage, art history, science studies, cultural studies, anthropology, memory studies and history. It is required reading for museum professionals seeking to adopt non-

discriminatory practices.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to

rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids

show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.
