countries, gathered in Auburn Hills, Michigan, at the Chrysler Tech Center, to attend a workshop "SSM'98" (or Sculptured Surface Machining '98) organized by IFIP Working Group 5.3. This was the first major workshop on sculptured surface machining since the CAM-I sponsored conference "Machining Impossible Surfaces" held in 1981. The purpose of the SSM'98 workshop, entitled "Machining Impossible Shapes", was to promote a cross-fertilization of ideas among three communities: industrial users, CAM software developers and academic researchers. There were 17 participants who were "industrial users", 15 represented CAM software developers, 4 were from the machine tool industry, with the remainder being academic researchers. The format of the meeting included 40 presentations in 9 sessions, 4 keynote speeches and a sufficient amount of time for informal discussion amongst the participants.

One of the most valuable aspects of the workshop was the opportunity for participants to meet informally and to discuss their mutual interests. This led to two "participant organized" sessions on five axis machining and on machine tool controllers.

**Handbook of Nanophysics** Klaus D. Sattler 2017-11-23 Covering the key theories, tools, and techniques of this dynamic field, *Handbook of Nanophysics: Principles and Methods* elucidates the general theoretical principles and measurements of nanoscale systems. Each peer-reviewed chapter contains a broad-based

introduction and enhances understanding of the state-of-the-art scientific content through fundamental equations and illustrations, some in color. This volume explores the theories involved in nanoscience. It also discusses the properties of nanomaterials and nanosystems, including superconductivity, thermodynamics, nanomechanics, and nanomagnetism. In addition, leading experts describe basic processes and methods, such as atomic force microscopy, STM-based techniques, photopolymerization, photoisomerization, soft x-ray holography, and molecular imaging. Nanophysics brings together multiple disciplines to determine the structural, electronic, optical, and thermal behavior of nanomaterials; electrical and thermal conductivity; the forces between nanoscale objects; and the transition between classical and quantum behavior. Facilitating communication across many

disciplines, this landmark publication encourages scientists with disparate interests to collaborate on interdisciplinary projects and incorporate the theory and methodology of other areas into their work.

**'In the Vaults Beneath'** Ceri Boston  
2009 Archaeological investigations, undertaken as part of a programme to restore St George's Church, Bloomsbury, to its original Hawksmoor splendour, involved the removal of 871 triple lead-lined coffins from within the crypt and monitoring works within the churchyard. The elaborate named coffins of upper middle class parishioners provided a valuable opportunity to greatly develop the new field of post-medieval coffin analysis, and to integrate historical, archaeological and osteological data in order to build a vivid picture of this population. Over 90% of coffins were named, which allowed a rare opportunity to blind test osteological methods on 72 skeletons, whilst analysis of documentary and osteological evidence has challenged some long-held beliefs in post-medieval burial archaeology. Disease patterns in the

St George's assemblage were influenced by the longevity and affluence of this population, factors that also underlay the necessity for elaborate and expensive dental treatment, including very early examples of fillings, filing and dentures.
