Fiery aristocrat, Eden Rose, uprooted from her native Scotland, has tended a foundering marriage and failing ranch at the corner of Crazy Woman Creek and the Powder River for a decade. Best friend, backwoods spitfire Maddie True, has her own woes a few miles away: widowed with a passel of young children, and caretaker to her addled father. Abandoned by her husband during the height of Wyoming Territory's worst drought in history, Eden depends on her inept brother, Aiden, to see her through the coming winter. But when he disappears into the wild Bighorn mountains, she shuns Maddie's fearful cautions, teaming with enigmatic Lakota holy man, Intah, to find her brother before the wicked snow holds them all hostage. "Light of the Northern Dancers is a powerful novel of a woman's journey, thought-provoking and unsettling in its authenticity and

unflinching honesty." — Susan Wiggs, NYT Bestselling Romance Author "Half of what happens to us may have reason, the rest is chaos. Robin F. Gainey's second novel, Light of the Northern Dancers, has this brand of existentialism. It' real and it doesn't let go!" — Tom Skerritt, Award Winning Actor, Writer, Director

scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). Tools for Survival James Wesley, Rawles 2014-12-30 Essential survival advice from a former U.S. Army Intelligence Corps Officer and the world's preeminent expert in preparedness. For years, James Wesley, Rawles has lived a self-sufficient lifestyle along with his family on a property surrounded by National Forest. In his earlier bestselling nonfiction book, *How to Survive the End of the World as We Know It*, Rawles outlined the foundations for survivalist living. Now, he details the tools needed to survive anything from a short-term disruption to a long-term, grid-down scenario. Here,

Rawles covers tools for every aspect of self sufficient living, including: • Food preservation and cooking • Welding and blacksmithing • Timber, firewood, and lumber • Firefighting • Archery and less-than-lethal defense tools • And more... Field-tested and comprehensive, *Tools for Survival* is a must-have reference for anyone who wants to know how to prepare for the worst.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You

might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and

the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession.

Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Motorized Obsessions Paul R.

Josephson 2007-08-22 From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the

United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

Complex Made Simple David C. Ullrich 2008 Perhaps uniquely among mathematical topics, complex analysis presents the student with the opportunity to learn a thoroughly developed subject that is rich in both theory and applications. Even in an introductory course, the theorems and techniques can have elegant formulations. But for any of these profound results, the student is often left asking: What does it really mean? Where does it come from? In Complex Made Simple, David Ullrich shows the student how to think like an analyst. In many cases, results are discovered or derived, with an explanation of how the students might have found the theorem on their own. Ullrich explains why a proof works. He will also, sometimes, explain why a tempting idea does not work. Complex Made Simple looks at the Dirichlet

problem for harmonic functions twice: once using the Poisson integral for the unit disk and again in an informal section on Brownian motion, where the reader can understand intuitively how the Dirichlet problem works for general domains. Ullrich also takes considerable care to discuss the modular group, modular function, and covering maps, which become important ingredients in his modern treatment of the often-overlooked original proof of the Big Picard Theorem. This book is suitable for a first-year course in complex analysis. The exposition is aimed directly at the students, with plenty of details included. The prerequisite is a good course in advanced calculus or undergraduate analysis.

A.W.N. Pugin and the Revival of

Memorial Brasses David Meara

1991 Examines the important contribution of Augustus Wellby Northmore Pugin (1812-52) in the revival of memorial brasses in English churches, an art that had declined since the middle ages. Puts Pugin's writings and many designs in the context of 19th century religious revival and the rising fortunes of the Catholic Church; and shows how his collaboration with metalworker John Hardman changed the attitudes about memorial brasses and restored a lost standard of craftsmanship. Well illustrated, largely by brass rubbings. Annotation copyrighted by Book News, Inc., Portland, OR
