Handout 12. Ising Model - Stanford University

J is a constant specifying the strength of interaction. The Ising model is usually studied in the canonical ensemble. (It would be a nightmare to do it in the microcanonical ensemble.) In the canonical ensemble, the probability of finding a particular spin configuration is $p(\{s_i\}) = \frac{1}{Z} \exp(-\beta H(\{s_i\}))$; $Z = \sum_{\{s_i\}} \exp(-\beta H(\{s_i\}))$

Aug 03, 2022 · problems, particularly strongly interacting ones, is in general notoriously difficult. This is mainly due to the fact that there is no general efficient classical computational method to directly solve these systems, as computational resource required is usually exponential in system size. However, many powerful analytical (e.g., Bethe ansatz ...
