Parentology Dalton Conley 2014-03-18 An

award-winning scientist offers his unorthodox

approach to childrearing: "Parentology is

brilliant, jaw-droppingly funny, and full of

wisdom...bound to change your thinking about

parenting and its conventions" (Amy Chua,

author of *Battle Hymn of the Tiger Mother*). If

you're like many parents, you might ask family

and friends for advice when faced with

important choices about how to raise your kids.

You might turn to parenting books or simply rely

on timeworn religious or cultural traditions. But

when Dalton Conley, a dual-doctorate scientist

and full-blown nerd, needed childrearing advice,

he turned to scientific research to make the big

decisions. In *Parentology*, Conley hilariously

reports the results of those experiments, from

bribing his kids to do math (since studies show

conditional cash transfers improved educational

and health outcomes for kids) to teaching them

impulse control by giving them weird names

(because evidence shows kids with unique

names learn not to react when their peers tease

them) to getting a vasectomy (because fewer

kids in a family mean smarter kids). Conley

encourages parents to draw on the latest data to

rear children, if only because that level of

engagement with kids will produce solid and

happy ones. Ultimately these experiments are

very loving, and the outcomes are

redemptive—even when Conley's sassy kids

show him the limits of his profession.

Parentology teaches you everything you need to

know about the latest literature on

parenting—with lessons that go down easy.

You'll be laughing and learning at the same

time.

Electrophysiologic Evaluation in Otolaryngology

Bobby Ray Alford 1997-01-01 The past decade

has seen a rapid increase in the application of electrophysiologic measurement techniques in evaluating patients with hearing and balance disorders. Advances in computer technology have generated new and exciting applications in the areas of electrocochleography, electroneuronography, electronystagmography, and the auditory brainstem response. This book examines these recent developments and explores new areas of the field currently under investigation. An important issue in electrocochleography today is the widened AP-SP complex. Contributors to this book evaluate its significance in patients with cerebellopontine angle tumor. The many applications of the auditory brainstem response are surveyed, as well as the current status of the mid- and long-latency evoked responses. An overview of the relatively new area of otoacoustic emissions and its clinical applications is also included.

Practicing otolaryngologists, otolaryngology residents, audiologists, audiology students, and auditory and vestibular scientists will benefit most from this well-researched book.
