Mafioso, Big Business and the Financial Crisis Ingyu Oh 1999 This study attempts to fill the gap between the patterns of state-business relation and the structure of conglomerate organizational forms. Taking the South Korean chaebol and the Japanese keiretsu as example cases, the author argues that the Mafioso state in each country was responsible for the rise of these two different conglomerate organizations. In South Korea, the Mafioso state was hostile to big business (top-down manifesto state), forcing the chaebol owners to contribute illegal extracts from normal business activities. The big business owners in return tried to cope with state hostility through diversification and size expansion (in other words, the chaebol). In Japan, the Mafioso state was not hostile to big business because both of them wanted to fend off external economic and political hostilities, mostly from the US (defeated manifesto state). Keiretsu managers voluntarily paid illegal extracts from normal business activities to the state, which in return protected such informal inter-firm alliances. The result was the keiretsu with diffused ownership and high levels of diversification.

Smarter Faster Better Charles Duhigg 2016-03-08 From the bestselling author of The Power of Habit comes a fascinating new book exploring the science of productivity, and why, in today's world, managing how you think--rather than what you think about--can transform your life. Productivity, recent studies suggest, isn't always about driving ourselves harder, working faster and pushing ourselves toward greater "efficiency." Rather, real productivity relies on managing how we think, identify goals, construct teams and make decisions. The most productive people, companies and organizations don't merely act differently--they envision the world and their choices in profoundly different ways. This book explores eight concepts that are critical to increasing productivity. It takes you into the cockpit of two passenger jets (one crashes) to understand the importance of constructing mental models--telling yourself stories about yourself in order to subconsciously focus on what really matters. It introduces us to basic training in the U.S. Marine Corps, where the internal locus of control is exploited to increase self-motivation. It chronicles the outbreak of Israel's Yom Kippur War to examine cognitive closure--a dangerous trap that stems from our natural desire to feel productive and check every last thing off our to-do lists, causing us to miss obvious risks and bigger opportunities. It uses a high-achieving public school in Cincinnati to illuminate the concept of disfluency, which holds that we learn faster and more deeply when we make the data harder to absorb. It shows how the principles of lean manufacturing--in which decision-making power is pushed to the lowest levels of the hierarchy--allowed the FBI to produce a software system that had eluded them for years. It explores how Disney made Frozen into a record success by encouraging tension among animation teams--a version of what biologists refer to as the Intermediate Disturbance Hypothesis, which posits that nature is most creative when crises occur. With the combination of relentless curiosity, deep reporting and rich storytelling that defined The Power of Habit, Charles Duhigg takes readers from neurology laboratories to Google's brainstorming sessions and illustrates how we can all increase productivity in our lives.

Chrysler TorqueFlite A-904 & A-727 Tom Hand 2017-10-16 The A-904 and A-727, debuting in 1960 and 1962, respectively, are 3-speed automatic Chrysler TorqueFlite Transmissions. In Mopar circles, they have become synonymous with strength, durability, and performance. In fact, 43 years after its first application, A-904s were still found in the Jeep lineup! TorqueFlites are known for their dependability, but many have endured a tremendous amount of abuse over 50-plus years when hooked up to V-8 Mopar powerplants. There is little doubt that some of these automatics could be prone to failure, or at least need a thorough rebuild. Tom Hand shares his decades of experience rebuilding TorqueFlite transmissions with chapters dedicated to troubleshooting, disassembly and reassembly, performance modifications, post-installation procedures, and the most thorough source guide offered in print, ever. The author walks you through the TorqueFlite rebuild with color photos showcasing step-by-step procedures with highly detailed, easy-to-follow text. This book will keep money in your pocket and add experience to your résumé, but more important, it will help you get your Mopar back on the road! p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial}

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council 2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Lemon-Aid New Cars and Trucks 2013 Phil Edmonston 2012-12-01 Offers advice for prospective buyers of cars and trucks, reveals information on secret warranties and confidential service bulletins, and tells how to complain and get results.

Lemon-Aid New Cars and Trucks 2011 Phil Edmonston 2010-11-11 As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz - rich cars, poor quality. There's only one Saturn you should buy. Toyota - enough apologies: "when you mess up, 'fess up."

The diskette contains SGMLAB, a full-featured SGML application. *David Vizard's How to Build Horsepower* David Vizard 2010 Extracting maximum torque and horsepower from engines is an art as well as a science. David Vizard is an engineer and more aptly an engine building artist who guides the reader through all the aspects of power production and high-performance engine building. His proven high-performance engine building methods and techniques are revealed in this all-new edition of How to Build Horsepower. Vizard goes into extreme depth and detail for drawing maximum performance from any automotive engine. The production of power is covered from the most logical point from the air entering the engine all the way to spent gasses leaving through the exhaust. Explained is how to optimize all the components in between, such as selecting heads for maximum flow or port heads for superior power output, ideal valvetrain components, realizing the ideal rocker arm ratios for a particular application, secrets for selecting the best cam, and giving unique insight into all facets of cam performance. In addition, he covers how to select and setup superchargers, nitrous oxide, ignition and other vital aspects of high-performance engine building.

Carburetors and Intake Manifolds David Vizard 1996 Small mods and upgrades can result in large performance gains! Acclaimed technical writer David Vizard provides you with the latest technical updates to Carter, Holley, Predator, Weber, Dellorto, and Mikuni carburetors, plus calibration methods, analysis of different designs, mixture ratios and intake combinations. *Automotive Machining* Mike Mavrigian 2017-04-17 Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valvseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.

South Korean Engagement Policies and North Korea Key-young Son 2006 A fresh historical and theoretical exploration of the much-debated, but still elusive, question of the Korean divide. In contrast to much of the literature on the divide, which deals with state-building on the two sides of the Demilitarized Zone, this book sheds light on the slow, but steady process of homogenization between the two estranged peoples, as accelerated after the end of the Cold War and especially after the inauguration of President Kim Dae-jung in 1998. Providing immense empirical detail as well as theoretical debate on the ideas in policy shaping in South Korea, the book presents a rich 'history of enemies' and covers issues including: an overview of the structural shift and the rise and fall of identity groups in South Korea history of 'enemy-making' and 'peace-building' North Korea's external relations with the US, Japan and Europe Hyundai's groundbreaking, cross-border tourism and other economic cooperation projects the lingering nuclear weapons crises. By focusing on the question of identities, the book presents a new approach on one of the most important legacies of the Cold War and threat to peace in the contemporary world: the divided Korean peninsula. As such it fills a major gap in the literature, utilizing new theoretical and empirical frameworks to deal with the Korean division and its future implications in East Asia.

Proceedings of the International Conference on Information Systems Design and Intelligent Applications 2012 (India 2012) held in Visakhapatnam, India, January 2012 Suresh Chandra Satapathy 2011-12-14 This volume contains the papers presented at INDIA-2012: international conference on Information system Design and Intelligent Applications held on January 5-7, 2012 in Vishakhapatnam, India. This conference was organized by Computer Society of India (CSI), Vishakhapatnam chapter well supported by Vishakhapatnam Steel, RINL, Govt of India. It contains 108 papers contributed by authors from six different countries across four continents. These research papers mainly focused on intelligent applications and various system design issues. The papers cover a wide range of topics of computer science and information technology discipline ranging from image processing, data base application, data mining, grid and cloud computing, bioinformatics among many others. The various intelligent tools like swarm intelligence, artificial intelligence, evolutionary algorithms, bio-inspired algorithms have been applied in different papers for solving various challenging IT related problems.

Advanced Electric Drive Vehicles Ali Emadi 2014-10-24 Electrification is an evolving paradigm shift in the transportation industry toward more efficient, higher performance, safer, smarter, and more reliable vehicles. There is in fact a clear trend to move from internal combustion engines (ICEs) to more integrated electrified powertrains. Providing a detailed overview of this growing area, Advanced Electric Drive Vehicles begins with an introduction to the automotive industry, an explanation of the need for electrification, and a presentation of the fundamentals of conventional vehicles and ICEs. It then proceeds to address the major components of electrified vehicles—i.e., power electronic converters, electric machines, electric motor controllers, and energy storage systems. This comprehensive work: Covers more electric vehicles (MEVs), hybrid electric vehicles (HEVs), plug-in hybrid electric vehicles (PHEVs), range-extended electric vehicles (REEVs), and all-electric vehicles (EVs) including battery electric vehicles (BEVs) and fuel cell vehicles (FCVs) Describes the electrification technologies applied to nonpropulsion loads, such as power steering and air-conditioning systems Discusses hybrid battery/ultra-capacitor energy storage systems, as well as 48-V electrification and belt-driven starter generator systems Considers vehicle-to-grid (V2G) interface and electrical infrastructure issues, energy management, and optimization in advanced electric drive vehicles Contains numerous illustrations, practical examples, case studies, and challenging questions and problems throughout to ensure a solid understanding of key concepts and applications Advanced Electric Drive Vehicles makes an ideal textbook for senior-level undergraduate or graduate engineering courses and a user-friendly reference for researchers, engineers, managers, and other professionals interested in transportation electrification.

Auto Repair For Dummies Deanna Sclar 2019-01-07 Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.
