Books in Series 1985-89 1989 Cited in BCL3 and Sheehy . Formerly Books in series in the United States . The editor's solicitude expressed in the preface Bowker...has consistently recognized those areas in which we can assist to make the work of librarians...easier. It is because of this concern that we decided to publish the 1

The Second Attack on Pearl Harbor Steve Horn 2005 He also discusses a Japanese plan to bomb the Panama Canal that was abandoned when the war ended." "Horn's chronicling of these mostly unknown plans and operations adds an important dimension to the historical record."-- Jacket.

Naval Aviation News 1985-07

Eagles of the RAF Philip D. Caine 1994-07-01 U.S. citizens fought and died in WW II long before the Japanese attacked Pearl Harbor. Among them were the pilots of the Eagle Squadrons, three fighter squadrons of Britain's Royal Air Force manned by young U.S. flyers. This book tells how the Eagle squadrons were formed and summarizes the history of the units and evaluates their deeds, motivations, and contributions.

Draws on interviews from more than 35 surviving Eagles, their letters and memoirs, and official records. Depicts their daily lives along with special heroes and amazing sacrifices. "An important contribution to the study of American involvement in WWII. Highly recommended."

Books in Series, 1985-89 1989

Rcaf War Prize Flights, German and Japanese Warbird Survivors Harold A. Skaarup 2006-05-23 This handbook concerns the collection of Air Technical Intelligence, and the test flying of war prizes carried out by two RCAF bomber pilots who were posted to the Royal Aircraft Establishment's Foreign Aircraft Flight, Farnborough, in the United Kingdom in May 1945. Their primary task was to visit former Luftwaffe airfields, and to find and fly back any aircraft they deemed worthy of evaluation. The list of aircraft found here does not include every German combat aircraft of the Second World War, as it focuses on those warbirds captured and flown by members of the RCAF, or sent to Canada as war prizes. Very few of these rare aircraft exist today, and therefore, information on known locations where German, Japanese and Italian warbird survivors may be found is included. As a member of the Canadian Aviation Preservation Association and the Canadian Aviation Artists Association, the author strongly supports the

preservation of Canada's aviation heritage. The primary intent of this handbook is to provide information for aviation artists and enthusiasts looking for that unusual "never before painted" military aviation subject, and to support the efforts of those engaged in the search for those missing warbirds for which no examples currently exist.

International Warbirds John C. Fredriksen 2001 Covering the aircraft of 21 nations, this book offers illustrated portraits of 330 of the best-known and most significant military aircraft in history, from the canvas-covered biplanes of World War I to the technological marvels of today, and includes technical data and aviation lore.

The United States Marine Corps in Books and the Performing Arts Richard L. Hemenez 2001 This enormous annotated bibliography of the Marine Corps details fiction, nonfiction, stage, poetry, music, movie, and television references to the Marine Corps. It covers over 2,500 books, 500-plus Hollywood films, 80 made-for-television movies, 100 fictional television programs, articles, parts of books, dissertations, chronologies, dictionaries, and oral histories. Beginning with an introduction that focuses on the history of the Marine Corps, this work serves as research into such subjects as duty stations, ships, posts, heroes and their heroics, uniforms, boot camp, and equipment. Listed in the film section are over 100 former Marines who are film and television actors. Reflecting the comprehensiveness of the book, there are over 15,000 subject headings (totaling over 25,000 indexed items). The researcher (and the research librarian) will appreciate the depth and the breadth of the book.

The Compact Timeline of Aviation History Anthony A. Evans 2008 'The Compact Timeline of Aviation History' encompasses the entire history of flight, from the days of legends, balloons and gliders to the latest high-tech aircraft.

A War of Their Own Captain Usaf Rodman, Matthew 2012-07-31 As shared by Jonathan D. George, Colonel, USAF with regard to Matthew K. Rodman's, book "A War on Their Own: Bombers over the Southwest Pacific." "Capt. Matt Rodman's book is an intriguing study of a moment in history when combat airpower played a key role in achieving victory. He expertly recounts how Fifth Air Force quickly developed new tactics and procedures that "saved the day." The perfection of low-altitude bombing, strafing, and skip bombing made differences that in hindsight are easy to recognize and quantify. Without them the Fifth would have found itself in a longer, costlier fight with an uncertain outcome. However, these new tactics hurt the enemy to the extent that the Allies

Downloaded from kcwiki.moe on September 26, 2022 by guest

eventually prevailed. The real value of Captain Rodman's study, however, lies not so much in his excellent retelling of significant developments in airpower as in his pushing the need for us to be flexible, adaptive, opportunistic, and entrepreneurial while safeguarding our core values and capitalizing on our core competencies. He therefore helps us take some of the uncertainty out of the largely unpredictable future by stressing the importance of "effective adaptability." Obviously, many components determine success—preparation, resources, knowledge, and determination, to name just a few. None of these, however, have nearly the importance as the creative ability to adapt effectively in order to confront the threat and deliver victory. By telling us the story of Fifth Air Force in the Southwest Pacific, Captain Rodman schools us on our need to employ all of our resources creatively, no matter their limitations. Our future battles will be new and different, as will the actions we take, even though they derive from our past successes. In the mid-1980s, experts would have had difficulty forecasting the effectiveness of the precision and near-precision aerial strikes we executed in Iraq just a few years later. In the mid-1990s, almost no one could have envisioned allied and joint ground forces, some riding on horseback, communicating through satellites to a multitude of aircraft that produced effects leading to our triumph in Operation Enduring Freedom. Today we can only venture a guess—and probably not very accurately—at what we will confront in the coming years. But this much is certain: we will face challenges unlike those of the past, and victory will go to the team that can best adapt its resources to stop the enemy. Captain Rodman's great effort convinces us that it is our legacy to maintain and even enhance that ability."

Modelling the Messerschmitt Bf 110 Brett Green

2012-02-20 The Messerschmitt Bf 110 was undoubtedly one of the most significant aircraft of World War II. Despite suffering setbacks in the summer of 1940 at the

hands of the RAF, it continued to be used effectively in other theatres and roles until the last days of the war, particularly as a night fighter against RAF Bomber Command's strategic bombing campaign over the Reich. This title shows you how to correct and convert basic 1/48-scale kits of the Bf 110 into many different variants, using a wide selection of aftermarket detail sets, conversions, accessories and decals for both day and night fighter schemes.

Flying Warbirds Cory Graff 2014-11-03 Get a comprehensive look at how World War II was fought from the air. Do you want to get an up-close look at some of the rarest airplanes in the world? Are you curious about combat aircraft from World War II? In deluxe hard-back volumes, *Flying Warbirds* brings U.S., British, German, Russian and Japanese fighting planes from the 1930s and 1940s together, complete with detailed photographs to delight every aeronautics connoisseur. The airplanes at the Flying Heritage Collection were created at a time when aeronautical discovery had evolved to aviation mastery. Finely crafted by distinguished design bureaus with the leading technologies of the 1930s and 1940s, the main emphasis of the collection includes combat aircraft from World War II. In 1998, Paul G. Allen began acquiring and preserving these iconic warriors and workhorses, many of which are the last of their kind. Allen's passion for aviation and history, and his awareness of the increasing rarity of original WWII aircraft, motivated him to restore these artifacts to the highest standard of authenticity. Periodically, one or more of the exhibits are temporarily absent to participate in an event, for maintenance, or for continuing restoration. Experience one of the world's top airplane collections any time you like through *Flying Warbirds*. Photographs include cockpit shots, exterior museum shots, historic photographs, and breathtaking contemporary flying shots from photographers like award-winning John Dibbs. *Flying Warbirds* is the definitive guide to everything you want to know about this fascinating period in aeronautics and

military history.

China Clipper Robert Gandt 2013-09-23 When the China Clipper shattered aviation records on its maiden six-day flight from California to the Orient in 1935, the flying boat became an instant celebrity. This lively history by Robert Gandt traces the development of the great flying boats as both a triumph of technology and a stirring human drama. He examines the political, military, and economic forces that drove its development and explains the aeronautical advances that made the aircraft possible. To fully document the story he includes interviews with flying boat pioneers and a dynamic collection of photographs, charts, and cutaway illustrations.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice

when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Visual Aircraft Recognition U. S. Army 2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

Flying Wings & Radical Things Anthony Chong 2016-06-15

John K. "Jack" Northrop and the company he founded in 1939, Northrop Aircraft, Inc., will be forever linked with the giant futuristic Flying Wings of the 1940s. But those iconic designs were not the only ideas to spring from the mind of this pioneering visionary and the innovative engineers who followed him. Many piston-powered and turbojet concepts, both conventional and radical in shape and purpose, were proposed and developed over the company's proud fifty-five year history. This book unveils Northrop's once-secret radical designs, many for the first time, with never-before-published drawings, models, and photos of such novel concepts as a ship-based vertical take-off and landing fighter, a supersonic intercontinental cruise

missile, a rocket-boosted jet spaceplane trainer, and a radical combination truck/aircraft/boat cargo vehicle. Much of this material has only recently been declassified. Here for the first time is the untold story of Northrop's rare, unique, and formerly super-secret aircraft and spacecraft of the future. Featuring stunning original factory artwork, technical drawings, and never-before-seen photographs, this book shows an amazing array of radical high-performance aircraft concepts from Jack Northrop and his team of brilliant and innovative engineers.
